PROFILE

Remote Python/backend automation engineer for internal tools, API/CRM integrations, and QA/API workflows. I turn messy business processes into FastAPI/PostgreSQL/Telegram/admin slices with tests or smoke evidence, docs, and handoff notes. AI speeds up execution; verification and product boundaries stay mine.

Public proof is based on business workflow shape, not tutorials: Telegram intake -> backend validation -> database record -> admin queue -> operator status. Private data is replaced by synthetic public evidence.

Role fit: Junior Python Backend, QA Automation Python, API Testing, CRM/API Integration, Internal Tools Engineer.

Can take on now: one endpoint, data model, admin queue step, API/CRM mapping, QA/API check, or runbook gap; I will ship a reviewed slice with evidence and handoff.

First month: map workflow/risk -> ship one backend/integration/QA slice -> document evidence -> repeat on the next 2-4 slices. Proof: Autoschool Intake/Admin page and recruiter packet use synthetic public evidence only.

Stack: Python, FastAPI, PostgreSQL, pytest, REST/OpenAPI, Docker Compose, GitHub Actions, RAG, n8n, Telegram, CRM/ERP/API integrations, Systems Integration, audit logs, runbooks.

CURRENT EXPERIENCE

Python Backend Automation / Internal Tools Engineer Remote, March 2024 - Present
Autoschool54 / DriveDesk backend/internal-tools work

- Support live admin/operator workflows across documents, schedules, payments, accounts, access, and troubleshooting.
- Translate unclear business problems into technical actions, repeatable workflows, documentation, and recovery paths.
- Use AI tooling for discovery, implementation, debugging, docs, and review while verifying outputs through inspection, tests, logs, smoke checks, and hands-on review.

PUBLIC PROOF PROJECTS

Autoschool Intake/Admin Proof - alexgerlitz.github.io/AlexGerlitz/autoschool-intake-admin.html
Synthetic public proof of Telegram request intake -> backend validation -> database record -> admin queue -> operator status workflow.

DriveDesk AI Operator - alexgerlitz.github.io/AlexGerlitz/drivedesk-ai-operator.html
Backend-owned AI workflow: document/transcript/CRM lead intake, RAG, call-analysis JSON, Telegram approval, audit, retries, and CRM handoff.

AI Ops Workflow Kit - github.com/AlexGerlitz/ai-ops-workflow-kit
Live FastAPI/PostgreSQL/pgvector backend with privacy redaction, approvals, idempotent outbox, transcript analysis, and dry-run CRM handoff.

DriveDesk Core - github.com/AlexGerlitz/drivedesk-core
FastAPI/PostgreSQL backend foundation: tenants, RBAC, audit/outbox, workers, adapter boundaries, OpenAPI, CI, docs.

TARGET WORK & STACK

- Backend/internal tools: APIs, data models, admin queues, validation, docs.
- QA/API verification: pytest, REST/OpenAPI checks, SQL/data checks, smoke routes.
- Integrations: Telegram, CRM/ERP/API adapters, Systems Integration, webhooks, retries, audit logs.
- AI workflow automation: RAG/transcript/ticket/lead flows with human approval.
- Reliability handoff: Docker Compose, GitHub Actions, health checks, runbooks, English technical documentation; Docker/CI as handoff tools, not platform-engineering ownership.

EDUCATION

Novosibirsk State Technical University (NSTU) - Applied Informatics, 2025 - Present.
