ROLE FIT SNAPSHOT

Best-fit first job: Junior Python Backend, QA Automation Python, API Testing, CRM/API Integration, or Internal Tools Engineer. I turn messy business workflows into FastAPI/PostgreSQL/Telegram/admin slices with tests or smoke evidence, docs, and handoff notes.

First assignment: one endpoint, data model, admin queue step, API/CRM mapping, QA/API check, or runbook gap; I will ship a reviewed slice with evidence and handoff.

Proof route: Autoschool Intake/Admin shows Telegram intake -> backend validation -> database record -> admin queue -> operator status, using synthetic public evidence only.

Truth boundary: AI speeds up implementation and debugging; architecture, privacy, verification, logs, docs, and product boundaries stay mine. Private data is replaced by synthetic public evidence.

First month: map workflow/risk -> ship one backend/integration/QA slice -> document evidence -> repeat on the next 2-4 slices.

Search-match stack: Python, FastAPI, PostgreSQL, pytest, REST/OpenAPI, Docker Compose, GitHub Actions, RAG, n8n, Telegram, CRM/ERP/API integrations, workflow integration, audit logs, runbooks.

CURRENT EXPERIENCE

Python Backend Automation / Internal Tools Engineer Remote, March 2024 - Present
Autoschool54 / DriveDesk backend/internal-tools work

- Since March 2024, support live admin/operator workflows across documents, schedules, payments, accounts, access, and troubleshooting.
- Translate unclear business requests into small technical actions, repeatable workflows, documentation, and recovery paths.
- Use AI tooling for discovery, implementation, debugging, docs, and review while verifying outputs through inspection, tests, logs, smoke checks, and hands-on review.

PUBLIC PROOF PROJECTS

Autoschool Intake/Admin Proof - alexgerlitz.github.io/AlexGerlitz/autoschool-intake-admin.html
Synthetic public proof of Telegram request intake -> backend validation -> database record -> admin queue -> operator status workflow.

DriveDesk AI Operator - alexgerlitz.github.io/AlexGerlitz/drivedesk-ai-operator.html
Backend-owned AI workflow: document/transcript/CRM lead intake, RAG, call-analysis JSON, Telegram approval, audit, retries, and CRM handoff.

AI Ops Workflow Kit - github.com/AlexGerlitz/ai-ops-workflow-kit
Live FastAPI/PostgreSQL/pgvector backend with privacy redaction, approvals, idempotent outbox, transcript analysis, and dry-run CRM handoff.

DriveDesk Core - github.com/AlexGerlitz/drivedesk-core
FastAPI/PostgreSQL backend foundation: tenants, RBAC, audit/outbox, workers, adapter boundaries, OpenAPI, CI, docs.

TARGET WORK & STACK

- Backend/internal tools: APIs, data models, admin queues, validation, docs.
- QA/API verification: pytest, REST/OpenAPI checks, SQL/data checks, smoke routes.
- Integrations: Telegram, CRM/ERP/API adapters, workflow integration, webhooks, retries, audit logs.
- AI workflow automation: RAG/transcript/ticket/lead flows with human approval.
- Reliability handoff: Docker Compose, GitHub Actions, health checks, runbooks, English technical documentation; Docker/CI as handoff tools, not platform-engineering ownership.

EDUCATION

Novosibirsk State Technical University (NSTU) - Applied Informatics, 2025 - Present.
