SUMMARY

Remote-only AI automation, backend/platform, and DevOps engineer focused on DriveDesk AI Operator: backend-owned RAG/transcript workflows, CRM/ERP integrations, FastAPI/PostgreSQL backends, Docker/CI deployment paths, health checks, docs, and recovery procedures.

Search-match stack: Python, FastAPI, PostgreSQL, Docker, Docker Compose, RAG, n8n, Telegram, CRM/ERP/API integrations, Systems Integration, Backend Development, Platform Engineering, Workflow Automation, DevOps, GitHub Actions, OpenAPI, and PostgreSQL/pgvector-backed workflows.

Search-fit titles: Back End Developer, Python Developer, AI Automation Engineer, Artificial Intelligence Engineer with a workflow/backend focus, Platform Engineer, DevOps Engineer, Integration Engineer.

Fast fit: remote-only work with a concrete technical outcome, real systems, and a working slice that can be tested, logged, documented, demonstrated, and handed off. Shortlist signal: backend-owned state, integrations, logs, tests, docs, and handoff. Europe-compatible signal: English-first docs, async review paths, privacy/integration boundaries, CI, runbooks, and timezone-friendly handoff.

AI-native delivery loop: AI tooling compresses discovery, implementation, debugging, docs, and review while architecture, state boundaries, privacy checks, tests, logs, deployment, runbooks, and shipped quality stay engineering-owned.

Ownership signal: incomplete context -> risky boundary -> reviewable outcome with backend-owned state, AI-output checks, CI/smoke, docs, runbooks, and handoff notes.

Proof by intent: recruiter screen -> [linkedin-recruiter-packet.html](https://www.linkedin.com/recruiter-packet.html); AI/RAG -> [ai-automation-role-fit.html](https://alexgerlitz.github.io/AlexGerlitz/ai-automation-role-fit.html); Backend/Platform -> [ai-backend-proof-pack.html](https://alexgerlitz.github.io/AlexGerlitz/backend-platform.html); CRM/API or DevOps -> [enterprise-readiness.html](https://alexgerlitz.github.io/AlexGerlitz/enterprise-readiness.html); first message -> [decision-ready-contact.html](https://alexgerlitz.github.io/AlexGerlitz/decision-ready-contact.html).

TARGET WORK

- Remote-only backend, platform, DevOps, and AI automation roles.
- Back End Developer / Python Developer roles around APIs, data models, validation, tests, Docker/CI, and handoff docs.
- AI sales/support workflows around document/transcript/lead intake, RAG, call-audio transcription, transcript analysis, lead scoring, approvals, and CRM actions.
- AI / operations automation work around workflows, APIs, integrations, docs, metrics, and human oversight.
- Internal tools, admin panels, fixed-scope automation, integration adapters, deployment paths, health checks, backups, observability, and recovery workflows.

CURRENT EXPERIENCE

AI Automation & Digital Infrastructure Engineer Remote, March 2024 - Present
Autoschool54 / DriveDesk platform work

- Support live business workflows across admin/operator processes, documents, schedules, payments, accounts, access, and troubleshooting.
- Translate unclear non-technical problems into technical actions, checklists, repeatable workflows, and documentation.
- Use AI tooling to compress discovery, implementation, debugging, docs, and review while keeping delivery ownership explicit.
- Verify AI outputs and AI-accelerated changes through inspection, tests, logs, smoke checks, docs, and hands-on review before shipping.

PUBLIC PROOF PROJECTS

DriveDesk AI Operator - alexgerlitz.github.io/AlexGerlitz/drivedesk-ai-operator.html
Main flagship proof: document/transcript/CRM lead ingestion, call-audio processing, RAG, call-analysis JSON, Telegram approval, and auditable CRM adapter action.
Stack: FastAPI, PostgreSQL/pgvector, document APIs, RAG, n8n, Telegram, CRM adapter, Docker, CI.

DriveDesk Core - github.com/AlexGerlitz/drivedesk-core
Backend/platform foundation: tenants, RBAC, audit/outbox, workers, adapter boundaries, OpenAPI, CI, docs, and public demo.
Stack: Python, FastAPI, PostgreSQL, Alembic, Docker Compose, pytest, OpenAPI.

AI Ops Workflow Kit - github.com/AlexGerlitz/ai-ops-workflow-kit/blob/main/docs/PUBLIC_PROOF_STATUS.md
Live FastAPI AI/RAG workflow backend: document/CRM/call intake, privacy redaction before RAG/approval/CRM handoff, transcript analysis, Telegram approvals, dry-run Bitrix CRM handoff, idempotent outbox, live PostgreSQL/pgvector persistence, reviewer acceptance report, production-readiness drill, Docker, and importable n8n workflow artifact.
Stack: FastAPI, PostgreSQL/pgvector, Docker, document APIs, n8n, Telegram.

DeployMate - github.com/AlexGerlitz/deploymate
Self-hosted deployment control panel proof: Docker apps, VPS/SSH tooling, CI/CD, health checks, logs, runbooks, and release discipline.
Stack: FastAPI, Next.js, PostgreSQL, Docker, SSH, CI/CD.

CORE SKILLS

- Backend/platform: Python, FastAPI, PostgreSQL, Alembic, OpenAPI, pytest, service contracts.
- AI workflows: LLM/RAG systems, vector databases / PostgreSQL pgvector, OpenAI/Claude/Gemini provider boundary, document/call-audio/transcript processing, n8n artifact, call analysis, scoring, approvals.
- Integrations: Systems Integration, Customer Relationship Management (CRM), Enterprise Resource Planning (ERP), APIs, webhooks, custom databases, accounting/banking boundaries, mapping, validation.
- DevOps/self-hosting: Docker Compose, GitHub Actions, release gates, health checks, logs, backups, smoke checks, recovery thinking.
- Product execution: clarify messy requirements, scope a working slice, verify it, document it, and leave an operation path.
- English: technical documentation, async writing, and engineering communication.

EDUCATION

Novosibirsk State Technical University (NSTU) - Applied Informatics, 2025 - Present.
