SUMMARY

Remote-only Python/backend automation and internal-tools engineer focused on DriveDesk AI Operator and Autoschool Intake/Admin: backend-owned RAG/transcript workflows, CRM/ERP integrations, Telegram intake to admin handoff, FastAPI/PostgreSQL backends, tests, smoke checks, Docker/Compose boundaries, docs, runbooks, and recovery notes.

Search-match stack: Python, FastAPI, PostgreSQL, pytest, REST APIs, OpenAPI, Docker, Docker Compose, GitHub Actions, RAG, n8n, Telegram, CRM/ERP/API integrations, Systems Integration, Backend Development, QA Automation Python, Workflow Automation, audit logs, runbooks, and PostgreSQL/pgvector-backed workflows.

Search-fit titles: Junior Backend Developer, Junior Python Developer, Back End Developer, Python Developer, Python Automation Engineer, Backend Automation Engineer, QA Automation Python, API Testing / Test Automation Engineer, Support Engineer with Python, Integration Engineer, CRM/API Integration Engineer, Internal Tools Engineer, AI Automation Engineer, LLM Workflow / RAG Engineer.

Fast fit: remote-only work with a concrete technical outcome, real systems, and a working slice that can be tested, logged, documented, demonstrated, and handed off. Shortlist signal: backend-owned state, integrations, logs, tests, docs, and handoff.

Europe-compatible signal: English-first docs, async review paths, privacy/integration boundaries, CI, runbooks, and timezone-friendly handoff.

AI-native delivery loop: AI tooling compresses discovery, implementation, debugging, docs, and review while architecture, state boundaries, privacy checks, tests, logs, deployment, runbooks, and shipped quality stay engineering-owned.

Ownership signal: incomplete context -> risky boundary -> reviewable outcome with backend-owned state, AI-output checks, CI/smoke, docs, runbooks, and handoff notes.

First screen answer: give me one endpoint, data model, admin queue step, API/CRM mapping, QA/API check, or runbook gap; I will turn it into a reviewed slice with tests or smoke evidence, docs, and handoff notes.

30-day output: workflow/risk map -> one working backend/integration/QA slice -> verification evidence -> next 2-4 slices. Proof route: First Backend Role -> Autoschool Intake/Admin -> Verification Pack.

TARGET WORK

- Remote-only Python/backend automation, internal tools, API/CRM integration, QA Automation Python, AI workflow automation, and reliability handoff roles.
- Junior Backend Developer / Junior Python Developer / Back End Developer roles around APIs, data models, validation, tests, Docker/CI, and handoff docs.
- Quality Assurance Automation Engineer / QA Automation Python / API Testing roles where Python, pytest, REST/OpenAPI checks, SQL/data checks, logs, smoke routes, and issue notes matter.
- AI sales/support workflows around document/transcript/lead intake, RAG, call-audio transcription, transcript analysis, lead scoring, approvals, and CRM actions.
- AI / operations automation work around workflows, APIs, integrations, docs, metrics, and human oversight.
- Internal tools, admin panels, fixed-scope automation, integration adapters, deployment paths, health checks, backups, observability, and recovery workflows.

CURRENT EXPERIENCE

Python Backend Automation / Internal Tools Engineer
Autoschool54 / DriveDesk backend/internal-tools work

Remote, March 2024 - Present

Remote AI-assisted backend/internal-tools and digital operations support for a live driving-school operation.

- Support live business workflows across admin/operator processes, documents, schedules, payments, accounts, access, and troubleshooting.
- Translate unclear non-technical problems into technical actions, checklists, repeatable workflows, and documentation.
- Use AI tooling to compress discovery, implementation, debugging, docs, and review while keeping delivery ownership explicit.
- Verify AI outputs and AI-accelerated changes through inspection, tests, logs, smoke checks, docs, and hands-on review before shipping.

PUBLIC PROOF PROJECTS

Autoschool Intake/Admin Proof - alexgerlitz.github.io/AlexGerlitz/autoschool-intake-admin.html

First-job backend/internal-tools proof: Telegram request intake, backend validation, database record, admin queue handoff, operator status workflow, and synthetic-only public evidence.

Surface: Telegram bot boundary, backend validation, records, admin workflow, status states, privacy review.

DriveDesk AI Operator - alexgerlitz.github.io/AlexGerlitz/drivedesk-ai-operator.html

Main flagship proof: document/transcript/CRM lead ingestion, call-audio processing, RAG, call-analysis JSON, Telegram approval, and auditable CRM adapter action.

Stack: FastAPI, PostgreSQL/pgvector, document APIs, RAG, n8n, Telegram, CRM adapter, Docker, CI.

DriveDesk Core - github.com/AlexGerlitz/drivedesk-core

Backend/internal-tools foundation: tenants, RBAC, audit/outbox, workers, adapter boundaries, OpenAPI, CI, docs, and public demo.

Stack: Python, FastAPI, PostgreSQL, Alembic, Docker Compose, pytest, OpenAPI.

AI Ops Workflow Kit - github.com/AlexGerlitz/ai-ops-workflow-kit/blob/main/docs/PUBLIC_PROOF_STATUS.md

Live FastAPI AI/RAG workflow backend: document/CRM/call intake, privacy redaction before RAG/approval/CRM handoff, transcript analysis, Telegram approvals, dry-run Bitrix CRM handoff, idempotent outbox, live PostgreSQL/pgvector persistence, reviewer acceptance report, production-readiness drill, Docker, and importable n8n workflow artifact.

Stack: FastAPI, PostgreSQL/pgvector, Docker, document APIs, n8n, Telegram.

DeployMate - github.com/AlexGerlitz/deploymate

Self-hosted deployment control panel proof: Docker apps, VPS/SSH tooling, CI/CD, health checks, logs, runbooks, and release discipline.

Stack: FastAPI, Next.js, PostgreSQL, Docker, SSH, CI/CD.

CORE SKILLS

- Python/backend/internal tools: Python, FastAPI, PostgreSQL, Alembic, OpenAPI, pytest, service contracts.
 - QA/API verification: QA Automation Python, API Testing, pytest, REST/OpenAPI checks, SQL/data checks, logs, smoke routes, and issue notes.
 - AI workflows: LLM/RAG systems, vector databases / PostgreSQL pgvector, OpenAI/Claude/Gemini provider boundary, document/call-audio/transcript processing, n8n artifact, call analysis, scoring, approvals.
 - Integrations: Systems Integration, Customer Relationship Management (CRM), Enterprise Resource Planning (ERP), APIs, webhooks, custom databases, accounting/banking boundaries, mapping, validation.
- Reliability handoff: Docker Compose, GitHub Actions, release gates, health checks, logs, backups, smoke checks, recovery thinking.
 - Product execution: clarify messy requirements, scope a working slice, verify it, document it, and leave an operation path.
 - English: technical documentation, async writing, and engineering communication.

EDUCATION

Novosibirsk State Technical University (NSTU) - Applied Informatics, 2025 - Present.
